

Spaced retrieval: a one-page methods note

Original Plethora demo PDF. License: CC0-1.0. No third-party figures.

Aim

Measure whether a closed-book retrieval attempt, followed by restudy of misses, beats an equal-time reread of the same passage after 24 hours including sleep.

Procedure

1. Study a 400-word passage once (no highlighting as the study method).
2. Immediate free recall (2 minutes). Score idea units, not wording.
3. Restudy only missed idea units for 3 minutes.
4. Sleep in a habitual window. No additional exposure.
5. Delayed free recall at +24 h. Primary outcome: idea-unit count.

Comparator

Equal total time spent rereading the passage. Same delay and scoring.

Notes

Failed recall is data: shorten the next gap. Fluency during reread is not scored.
